

PeakPick — UI/UX Design Specification

Implementation handoff for Claude Code • v1 • Grid, Loupe, Analytics Dashboard

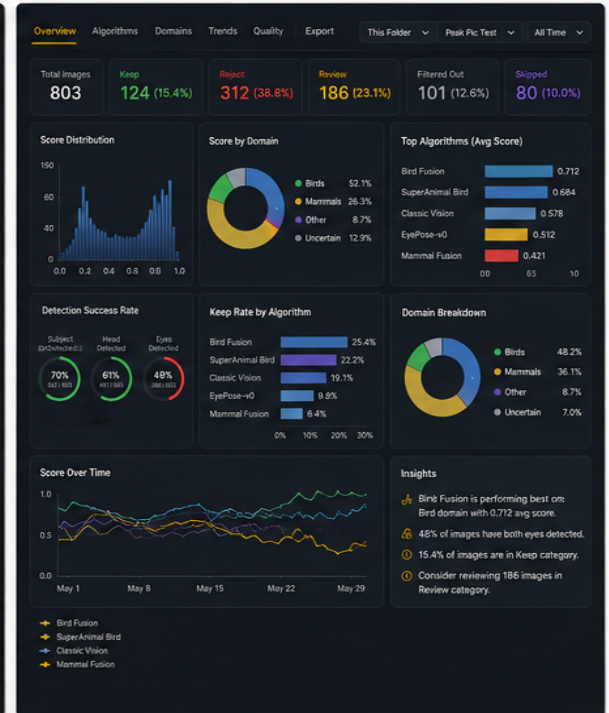

1. GRID – MAIN LIBRARY VIEW

2. LOUPE – DETAILED IMAGE REVIEW

3. ANALYTICS DASHBOARD

DESIGN SYSTEM

COLOR PALETTE

Dark Mode (Primary)

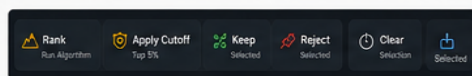

TYPOGRAPHY

Font Family: Inter

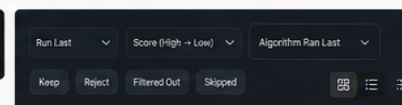

Aa Inter SemiBold Header / Titles Inter Medium Buttons / Labels Inter Mono Numbers / Code

TOP TOOLBAR – SPECIFICATION

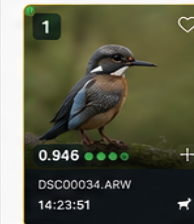

- Consistent height: 44px
- Icon left, label right
- Clear primary actions
- High contrast, large click area
- Active state with subtle glow

SECONDARY TOOLBAR – SPECIFICATION

- Organized by function: Filter → Sort → Color Source → View
- Compact height: 36px
- Chips for quick filter states
- Persistent selection indicators

THUMBNAIL CARD – SPECIFICATION

- Rank (position in sorted list)
- Favorite toggle
- Color border (by Color Source)
- Score (0.000 – 1.000)
- Rating dots (optional)
- Filename
- Capture time
- Domain icon
- More menu

ICON STYLE

- Simple, modern, outline icons
- 20–22px, 2px stroke
- Consistent rounded corners
- Clear meaning at small size

Design principles

- The photograph is always the dominant content.
- Primary actions are visually stronger than contextual controls.
- Grid is for rapid scanning; Loupe is for deep inspection; Dashboard is for analysis.
- Algorithm results are traceable to an algorithm's latest successful run.
- Use consistent spacing, typography, colors, radii and interaction states.

Grid

- Top toolbar: Rank, Apply Cutoff, Keep, Reject, Clear Selection, Export.
- Secondary controls: Algorithm Ran Last / Color Source, Sort, Filter, Domain, Search, Burst, View.
- Left sidebar: Recent Folders and Collections.
- Thumbnail: rank, favorite, photo, selected-source score 0.xxx, filename, capture time, status color, optional domain/rating.
- Categories: Keep, Review, Reject, Filtered Out, Skipped. Do not show every algorithm score on thumbnails.

Loupe

- Left panel shows all latest algorithm scores simultaneously.
- Selecting an algorithm highlights it and makes it the Elements source.
- Right panel shows Head / Left Eye / Right Eye confidence for the selected algorithm.
- Boxes and Elements may coexist.
- Primary score is prominent and formatted 0.xxx.
- Zoom: pinch, +/-, wheel if reliable, presets 100/150/200/300. Zoom persists across navigation.
- K/R decisions and Hebrew physical-key behavior must work without relying on Unicode layout.
- Loupe must open valid images even when detection fails.

Analytics Dashboard

- Header tabs: Overview, Algorithms, Domains, Trends, Quality, Export.
- Scope: current folder and date range.
- KPI cards: Total Images, Keep, Reject, Review, Filtered Out, Skipped.
- Charts: Score Distribution, Score by Domain, Top Algorithms, Detection Success, Keep Rate, Domain Breakdown, Score Over Time, Insights.

Architecture / cache

- Each algorithm retains only its latest successfully completed run.
- Algorithm-specific object detection, crop, head, eye and score results must not overwrite another algorithm's results.
- A new run is promoted to latest only after it completes successfully; old artifacts are removed afterward when safe.
- Physical deduplication is allowed only for genuinely identical artifacts.
